

Security Systems

Access Control Systems Products

- 1.CCTV Camera Systems
- 2.Alarm system (monitored, unmonitored)(Wire/wireless)
4. Access control

a) Wiegand Proximity Readers

The **Wiegand** interface is a de facto wiring standard which arose from the popularity of **Wiegand** effect card **readers** in the 1980s. It is commonly used to connect a card swipe mechanism to the rest of an access control system. ... A **Wiegand**-compatible **reader** is normally connected to a **Wiegand**-compatible security panel.

- magnetic card readers,
- proximity readers,
- barcodes
- smart cards with embedded microprocessors.

Traffic security

Perimeter security

Protecting the facility and assets from unauthorized persons is an important part of any security system. Some items to consider include:

- Compound or facility access control
 - Control perimeter: Fences, bollards, anti-ram barriers
 - Traffic control, remote controlled gates, anti-ram hydraulic drop arms, hydraulic barriers, parking control systems
 - Forced-Entry-Ballistic Resistant (FE-BR) doors, windows, walls and roofs
 - Barrier protection for man-passable openings (greater than 96 square inches) such as air vents, utility openings and culverts
 - Mechanical locking systems
 - Elimination of hiding places
 - Multiple layer protection processes
- Perimeter intrusion detection systems
 - Clear zone
 - Video and CCTV surveillance technology
 - Alarms

Detection devices (motion, acoustic, infrared)

Insider Threats

One of the most serious threats may come from persons who have authorized access to a facility. These may include disgruntled employees or persons who have gained access through normal means (e.g., contractors, support personnel, etc). To mitigate this threat some items to consider include:

Limit and control access to sensitive areas of the facility

Compartmentalization within the building/campus

Two-man rule for access to restricted areas

Explosive Threats

Stationary and Moving Vehicle-Delivered, Mail Bombs, Package Bombs

Ballistic Threats

These threats may range from random drive-by shootings to high-powered rifle attacks directed at specific targets within the facility (assassinations).

Cyber and Information Security Threats

Businesses rely heavily on the transmission, storage, and access to a wide range of electronic data and communication systems. Protecting these systems from attack is critical

Personnel identification systems

- Access control, fingerprints, biometrics, ID cards
- Credential management
- Tailgating policies
- Primary and secondary credential systems

Protection of information and data

- Acoustic shielding
- Shielding of electronic security devices from hostile electronic environments
- Computer screen shields
- Secure access to equipment, networks, and hardware, e.g. satellites and telephone systems

Hydraulic Drop Arm Barrier

If there is a threat of vehicle attack in addition to the control of vehicle access in high security applications, **hydraulic drop arm barriers** are one of the best and most secure solutions.

Anti ram barriers
